

Sprite Industries are innovators of the shower and are known to be the world's finest, enabling everybody to enjoy free chlorine showers the world over.

Chlorine is universally used to chemically disinfect water. Chlorine is added to your water to destroy germs, bacteria and living organisms. You are also a living organism, and your body is affected by chlorine internally as well as externally. Inhalation and skin absorption of chloroform and chlorine by-products are greatest in the shower, where these gases are vaporized.
